

NIGMS HUMAN GENETIC CELL REPOSITORY ASSENT FORM

What is Assent?

Assent is the process of enrolling individuals into research studies who are not able to give consent for themselves. Legally authorized representatives must provide consent for children and cognitively impaired subjects to participate in research, but the investigator/submitter must attempt to obtain assent from the subject if it is possible. Children aged 7 through 17 can be enrolled using this assent document.

What is a research study?

We are doing a research study. A research study is a way to find out about something. We are trying to find out about the causes of diseases that run in families. Scientists want to find the causes of disease so they can help doctors to cure the disease or even stop it from happening in the first place.

What will happen if I participate?

If you want to be in the study, this is what will happen. We will take a small amount of blood from your arm or a small piece of skin from the inside of your arm. This sample will be used to make more samples that can be given to the scientists to study.

There are some parts of the study that might hurt or upset you when the blood or skin is taken, but we will make it as comfortable as possible for you. You might feel a pinching or burning for a few minutes or there may be a little bleeding that needs a BandAid.

Do I have to participate?

You can decide yourself if you want to be in this research study. We don't know if this study will help you, but someday we will learn something that will help other people.

You don't have to be in this study. It is up to you. You will still be taken care of even if you decide that you don't want to be in the study.

If you want to be in this study, please sign or print your name.

I, _____, want to be in this research study.
